

The Rolls-Royce Silver Shadow Hydraulic System

A computer model

The hydraulic system of the Silver Shadow is a mystery to many owners and enthusiasts. To try and make some of the secrets more understandable, I have made a free computer model which you can download from here.

To start downloading (324 Kb) click **HERE (setup.exe)**

When you have downloaded the file, double-click it to run the installation program.

Two files will be installed in the c:\programfiler\SAMAG ans\Hydraulics folder, which will be created if it does not exist.

The main program file is HydraulikkPro.exe. Then there is a wav-file (Clickerx.wav) that produces clicking sounds to imitate the gear shifts (just a gimmick, you can delete it if you don't like it...).

The model is a bit memory consuming. To have it run smoothly I would believe you need at least 256 MB RAM.

Feel free to send me any comments, corrections and so on. My e-mail address is firmapost@samag.no

Optional: If you would like to be informed about updates to the model, please write your name, country (just curious..) and e-mail address below, and click the "Submit"-button.

I will NOT use your name and e-mail address for any other purpose.

Note: If you have already signed up for updates, you do not need to do it again.

Name:

Country:

e-mail:

The computer model is made by Tord Samdal, Norway, member of the Rolls-Royce Enthusiast's Club.
