RH 12050 (NGK BPR4EVX) Sparking plug

Applicable to

All Rolls-Royce and Bentley motor cars from the introduction of Silver Shadow and Bentley T series.

Introduction

This Product Support Information Sheet has been issued to advise of an alternative sparking plug for replacement purposes in service.

Description

The RH 12050 (NGK BPR4EVX) sparking plug was originally introduced on all 1989 model year turbocharged and catalyst equipped naturally aspirated motor cars, featuring improved fouling resistance and increased service life. This sparking plug has now been approved for service replacement use on all other Rolls-Royce and Bentley motor cars, from the introduction of Silver Shadow onwards.

It should be noted that if the RH 12050 sparking plug is fitted to earlier motor cars, the electrode gap should be set to the same figure as originally specified for the model type concerned.
