

Switching thresholds inherent in the schmitt trigger inputs of the Inverters.
 Rising Edge @ 15V supply 8.8V >> 10.8V
 Falling Edge @ 15V Supply 4 >> 5.8V
 Thresholds and Hysteresis is supply dependant
 Hysteresis nominally 3.5V >> 5V at 15V supply
 See data sheet for the 40106 for clarity

VR1 is a time constant setting for a low speed oscillator Nominally 1Hz
 This is what does the lamp flashing.
